

R-410A AND NEW R-32 MODELS

Air Handlers

An air handler regulates the circulation of the heated or cooled indoor air to help reach the temperature that you have set on your thermostat or control system. Depending on the design of your home, an air handler may be a principal indoor component of your split heat pump system.

When properly matched with your heat pump, the indoor air handler is designed to circulate conditioned air through your home's ductwork efficiently. Make sure that your system is performing to its optimum level with our Amana brand air handlers.
