

A2L INFORMED. A2L READY.

R32

**WE WOULD LIKE TO REMIND
OUR CUSTOMERS:**

The DOE/EPA restrictions and requirements for servicing equipment with approved refrigerants are quite stringent and thoroughly enforced.

Using R-32 in an R-454B unit is not only against manufacturers' recommendations due to differences in their chemical compositions and operating characteristics, it is also illegal. Unless an alternative has been approved by EPA's Significant New Alternatives Policy (SNAP) program (and the necessary system modifications have been made) each HVAC unit is designed for a specific refrigerant and using a different refrigerant can lead to malfunctions or damages.

Until further notice, in support of the industry and regulations, Daikin is only selling R-32 to customers buying HVAC equipment and limiting to **5 cylinders per week** to these customers.

WE'RE READY = YOU'RE READY.
PRODUCTS | TOOLS | PARTS | TRAINING & MORE!

Our continuing commitment to quality products may mean a change in specifications without notice.
